DeepVerif.AI

Unified fraud detection - install & test guide

What this app does

- Digital Arrest Shield: detects scam-call scripts (even from a polite caller) and pauses payments
- Deepfake check: reads a real pulse signal from the camera in 6 seconds
- Fake ID check: finds edited Aadhaar/PAN images or PDFs
- SMS phishing check: checks fake SMS and link history

QR code goes here
(run the script after deploying)

Scan or open the link

How to install (Android + Chrome, 2 minutes)

1. Scan the QR or open the link above in Chrome (the first load may take 30-60 seconds).
2. Chrome menu (three dots) -> tap 'Install app' or 'Add to Home screen'.
3. Open the 'DeepVerif' icon from the home screen. It runs like a full-screen app.
4. Tap 'Allow' for Camera and Microphone permission (only for the liveness scan and Shield).

How to test in 5 minutes

Shield tab	'Try scam-call sample' -> HIGH risk + red banner. 'polite-scammer sample' -> bhi HIGH.
Liveness tab	Real face -> REAL. Show a photo or a video on another phone -> FAKE.
SMS tab	'Try Fake Sample' -> PHISHING. 'Try Genuine Sample' -> SAFE.
Document tab	Upload a dummy ID, then upload an edited copy and compare.
Audit Log tab	'chain verified' should be shown.
Data Exposure tab	Check a password (it is hashed in the browser itself).

Keep in mind

- Use dummy / sample IDs only; never upload a real Aadhaar or PAN.
- Results are assistive, not a 100% guarantee. If fraud happens, call 1930 or visit cybercrime.gov.in.
- If you get an APK: Settings -> allow 'Install unknown apps'; if Play Protect warns, tap 'Install anyway'.
- iPhone: Safari -> Share -> Add to Home Screen. Android Chrome is better for the live mic listener.
